

BRITAIN DIAGNOSES 110 CASES OF BOWEL CANCER EVERY DAY

ONE OF OUR TOP
RESEARCHERS AND
DIAGNOSTICIANS IS
GERMAN

Prof Inke Nätke

Universities
Scotland

Inke Nätke

Role: Professor of Epithelial Biology

Works at: University of Dundee

Has been in Scotland for: 19

Dependents in Scotland: 2 children aged 19 and 24, neither of whom have been granted residence

Contribution to Britain: Her laboratory produces internationally recognised scientific insights into colon cancer. Working with engineers and clinicians across other Scottish universities, applying insights to develop diagnostic tools.

Message to Brexit negotiators:

//

EU citizens bring cultural diversity and openness that contributes crucially to the tolerance Scottish society is known for. My family and I love our lives here. We need an application process for residency to be straightforward for people who have made their homes here.

//

Over 4,500 EU staff work in Scottish HE. That's over 11% of our workforce. We value them greatly. Scotland & Britain needs them. They need certainty that their rights won't be weakened post-Brexit.
